DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/1/2006 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3-5, 7-11, 13-15, 17-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kubota (US 3,912,920).

Regarding claim 8, Kubota discloses a polarizer structure (Fig. 2) comprising a plurality of sections such as 31 and 32, each section comprising a plurality of transparent substrates 3a made of glass and producing polarized light (Fig. 1, lines 18-29, col. 2, lines 42-51, col. 3). However, Kubota does not disclose explicitly that the transparent substrates 3a causing the polarization of the incident light are made from quartz. Kubota does teach that polarization

Application/Control Number: 09/618,165

Art Unit: 2872

occurs when light strikes obliquely the plane of a transparent substance such as a glass plate (lines 42-58, col. 1). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use quartz plates instead glass plates in the polarizer structure of Kubota, since quartz is similar to glass and it is less susceptible to external deleterious factors. Regarding the limitation that the polarizer structure comprises a holder supporting the plurality of the polarizer sections, it is noted that it is inherent that the device of Kubota shown in Fig. 2 includes a holder to support the polarizer sheet. Furthermore, it is inherent that the polarizer holder includes a light absorptive material, since any material, which is not a perfect reflector absorbs incident light.

Regarding claims 3, 5, 13, 15, the glass polarizer sections are rectangular.

Regarding claims 7, 17, each section 31 comprises a plurality of glass substrates 3a (Fig. 1).

Regarding claims 9-10, 20-21, the plurality of the glass substrate parts is placed at a non-zero angle equal to the Brewster's angle relative to the normal line to the surface of the polarizer (lines 43-49, col. 1).

Regarding claims 11, 22, the device of Kubota further includes a light source 1 for generating light, and means 2 for directing light onto the polarizer sheet (Fig. 2).

Regarding claims 4, 14, Kubota does not specify that the sections 31 or 32 are triangular in shape. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the polarizer section triangular, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). Here, the result effective variable is the shape of the

Application/Control Number: 09/618,165

Art Unit: 2872

polarizer. A mesh of triangular shaped sections is more economical to make since it has fewer connecting edges.

Regarding claim 18, the means 2 for directing the light incident on the polarizer collimates the light (see Figs. 1-2, and lines 47-49, col. 2).

Regarding claim 19, the stack of glass substrates 31 partially polarizes the incident light (lines 51-57, col. 2).

Regarding claim 23, the degree of partial polarization depends on the number of glass substrates 3a stacked on top of one another (lines 26-34, col. 3).

Response to Applicant's Arguments

Applicant's arguments filed with the RCE on 5/1/2006 have been fully considered but they are not persuasive.

Applicant argues that Kubota actually teaches away from using a polarizer holder that would absorb light, since Kubota teaches that the light component Ps (reflected light) illuminates the environment over a wide angle. The examiner respectfully disagrees and notes that the above language does not necessarily imply that no light can be absorbed by the polarizer holder if it is incident thereupon. Kubota simply teaches that the design of the device is such that one light component is directed away from the incoming traffic direction. This has nothing to do with the light absorption properties of the holder material.

Conclusion

Any inquiry concerning this communication or earlier communications from the

Page 5

examiner should be directed to Dr. Leo Boutsikaris whose telephone number is 571-272-2308.

The examiner can normally be reached on M-F, 10-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Drew Dunn can be reached on 571-272-2312. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
